

Cam-Lift Doors with Von Duprin EPT-2 Electric Power Transfer

HARDWARE INSTALLER

When this unit is used on doors with Cam Lift hinges, Von Duprin has recommended that it be installed opposite to what is shown on their instructions to allow for the vertical movement as the door opens. The part marked 'frame' should be installed on the door with the telescoping section toward the top of the door. Use this sheet in addition to Von Duprin's own factor instructions.
