

HEAVY DOOR LIFTING LUGS

CAUTION: When handling heavy doors be sure to use cables or straps that are rated to handle the door weights as listed on Krieger's door schedule.

- Install Krieger supplied heavy duty lifting lugs into the tapped holes. After the door is hung securely in place remove the lifting lugs and install the supplied set screw. Set the screws flush to the face of the door.
- Set screw holes can be hidden with bondo, sanded smooth, and painted.

NOTE: DO NOT ATTEMPT TO LIFT THE DOOR FROM THE BOTTOM. DOING SO WILL STRAIN THE DOOR IN WAYS IT WAS NOT DESIGNED FOR AND COULD LEAD TO FITMENT, INSTALLATION AND OPERATIONAL ISSUES.
